

Computer Science graduate with a 9.3 CGPA and hands-on experience building end-to-end software systems using Python, JavaScript, Node.js, Go, REST APIs, and SQL/NoSQL databases. Built projects in secure file storage, real-time geospatial visualization, and AI-powered applications. Solved 300+ Data Structures & Algorithms problems with a strong focus on backend engineering and scalable software systems.

SKILLS

language & Tools : Python, JavaScript, C++, Git, GitHub

Backend & Framework : Node.js, Express.js, Flask, REST APIs

Databases & Frontend : MySQL, MongoDB, Supabase, HTML, CSS, Three.js

Core & AI/ML : Data Structures & Algorithms, OOP, Problem Solving, TensorFlow, OpenCV

MAJOR PROJECT

POST-QUANTUM CRYPTOGRAPHY VAULT -- Quantum-Resistant Secure File Storage Platform

[GitHub](#)

Python, ML-KEM-768 (Kyber), AES-256-GCM, Argon2, Ed25519, Cryptography

- Engineered a secure file vault combining post-quantum and classical cryptography to protect data against current and future quantum-computing threats
- Implemented ML-KEM-768 key exchange, AES-256-GCM encryption, Argon2 password hashing, and Ed25519 digital signatures for end-to-end confidentiality and integrity verification
- Built encrypted storage, secure extraction, automated backups, cloud synchronization, and a Python CLI for vault administration

EARTH VIEW – GEOTRACKER -- Real-Time Global Tracking & Geospatial Visualization Platform

[GitHub](#)

CesiumJS, JavaScript, REST APIs, OpenSky Network API, TomTom API, AISStream API, Real-Time Data Visualization

- Built an interactive 3D Earth platform rendering real-time flight, vessel, weather, traffic, and satellite data at global scale
- Integrated 3 live external APIs to stream and visualize 5+ telemetry parameters per object – speed, altitude, heading, coordinates, and trajectory
- Developed custom CesiumJS visualization layers with terrain rendering, navigation controls, and day/night simulation, optimized for high-density real-time data

CLOTHHUB -- Multi-Vendor Clothing Marketplace Platform

[GitHub](#)

Node.js, Express 5, MongoDB (Mongoose), EJS, Razorpay, Passport, JWT

- Developed a full-stack marketplace supporting 3 distinct roles – shopper, vendor, and admin – enforced server-side via role-based middleware, with a variant-aware product catalog across 20+ EJS views
- Implemented cart, favorites, order history, and a Razorpay checkout flow with signature-verified webhooks for reliable async payment confirmation
- Hardened the app with Helmet (nonce-scoped CSP), rate limiting, and express-validator input validation, backed by a 16-file unit test suite

TECHNICAL ACHIEVEMENTS

- Solved 300+ Data Structures & Algorithms problems on LeetCode, strengthening problem-solving and software engineering fundamentals.
- Developed AI-powered applications including an X-Ray Fracture Detection System and an AI-powered Visual Learning Roadmap Generator.

EDUCATION

Pravin Rohidas Patil College of Engineering & Technology

Bachelor of Computer Science CGPA : 9.3

Mumbai Maharashtra

2023 – 2026
